PROFESSIONAL SUMMARY

Full Stack Web / Backend Engineer with an Information Systems background and production experience building institutional web systems—healthcare LIS/HRIS, APIs, GIS/document platforms, e-commerce, and operations tools. I turn requirements into data models, APIs, backend logic, UI integration, testing, deployment, and handover. Comfortable owning features end-to-end (schema → API → UI → production) with Laravel/PHP, Node.js, Go, SQL databases, and Linux/cloud hosting.

Working style: analytical and independent (INTP-A) — I dig into system logic, challenge fuzzy requirements early, and prefer clear, well-structured solutions over rushed patches.

TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, SQL, Node.js, Go

Backend: Laravel, Node.js, Express.js, REST APIs

Frontend: jQuery, Bootstrap, responsive web UI

Databases: MySQL/MariaDB, PostgreSQL

Infra & Tools: Apache, Linux, Git, GCP, AWS, Figma, Visual Paradigm

Practices: requirements analysis, database/system design, UAT, deployment, documentation

WORK EXPERIENCE

CV. Rusabyte Indonesia — Full Stack Web Developer

July 2023 – Present | Pontianak, West Kalimantan

- Own full-cycle delivery of institutional web products (healthcare LIS/HRIS, dashboards, and operational systems): requirements clarification, data modeling, API/backend modules, UI integration, UAT, deployment, and handover.
- Design database schemas and module boundaries; implement REST/backend logic; coordinate sprint priorities, stakeholder demos, and production releases.
- Improve reliability of client workflows through validation rules, role-based access, reporting modules, and documented runbooks for operators.
- Collaborate with clients and internal teammates on scope control, technical trade-offs, and post-release support.

Zethlabs Indonesia — Full Stack Web Developer

2019 – June 2023 | Pontianak, West Kalimantan

- Delivered web applications (and supporting mobile clients) from analysis and system design through implementation, testing, and production deployment.
- Set up and maintained server/domain/hosting environments so applications were production-ready, including basic ops hardening and release support.
- Worked directly with clients on scope, priorities, timelines, and acceptance criteria across multiple concurrent projects.
- Built reusable patterns for CRUD modules, authentication/roles, reporting, and integrations used across client engagements.

CV. Idekite Indonesia — Senior Software Engineer

October 2017 – April 2021 | Pontianak, West Kalimantan

- Led requirements analysis for private clients, personal projects, government institutions, and related organizations—translating ambiguous needs into implementable specs.
- Designed databases, program flows, frontend/backend structure, and technical documentation before and during build.
- Mentored implementation quality through coding guidance, testing/validation, project communication, and structured application handover.
- Balanced multi-stakeholder delivery: clarifying scope, estimating effort, and keeping documentation usable for operators after go-live.

SELECTED PROJECTS

1. Sehatlink / Patologi Anatomi — Laboratory Information System (RSUD dr. Soedarso)

- LIS for anatomical pathology covering examination dashboards, patient request entry, patient records, examination validation, result reading/printing, medical history, reporting, and system audit logs.
- Supports end-to-end lab workflow: intake → validation → result release, with role-based access for lab staff and clearer traceability across modules.

2. Mikrolab — Laboratory / Microbiology Web Application

- Web app for microbiology/lab operations: structured exam requests, sample/status tracking, result entry, and operational reporting.
- Backend-oriented workflow control (status transitions, master data, user roles) to keep lab processes consistent day to day.

3. mySoedarso / Penilaian Kinerja — HRIS (RSUD Soedarso)

- Hospital HRIS spanning employee master data, leave & study permits, attendance, documents, data-change requests, remuneration, recruitment, and e-performance.
- Includes workforce dashboards/statistics and multi-step approval flows so HR and unit heads can monitor and authorize processes digitally.

4. API WA Kanim Sanggau — WhatsApp Integration API

- Backend messaging API that connects institutional workflows to WhatsApp (send/receive patterns, templates/events, delivery handling).
- Built for immigration-office use cases where staff need reliable outbound notifications and inbound handling without manual chat ops.

5. Robotopo Partner Backend — Partner API / Services

- Partner-facing backend services for marketplace integrations: auth/partner endpoints, transactional APIs, and data sync with partner systems.
- Focus on stable API contracts and server-side business rules rather than UI.

6. RusaHub — TypeScript Web Platform

- TypeScript platform modules for Rusabyte ecosystem services—API/UI integration, shared components, and product workflows.
- Emphasizes typed backend/frontend boundaries and maintainable module structure for ongoing product iteration.

7. 7StarFinance — Finance Web Application

- Finance operations web app: client/account handling, transaction flows, reporting, and admin configuration for finance staff.
- Backend modules enforce business rules around financial records, roles, and operational reporting.

8. WA 7StarFinance — WhatsApp Service Layer

- WhatsApp service layer paired with 7StarFinance for automated notifications, customer messaging hooks, and ops alerts.
- Separates messaging concerns from core finance modules via API/service integration.

9. REDDPLUS Kalbar — GIS / Environmental Document System

- Document and spatial-information system for REDD+ Kalbar: SRAP/FREL materials, carbon-stock guidelines, emission-reduction strategies, and target documents.
- Combines structured document management with GIS-oriented information needs for environmental planning stakeholders.

10. RIMBA — Ratu Intan Mining Operations App

- Operations management for mining business: payroll, tonnage recording, inventory/stock, and attendance.
- Centralizes daily operational data so payroll and stock movements stay documented and easier to audit.

11. HEDUPARTS — Spare Parts E-Commerce

- Marketplace-style e-commerce for spare parts: catalog, seller–buyer matching, search, cart/order flow, and inventory-related needs.
- Covers transaction path from product discovery to purchase handling.

12. DesaBira — Village Information System

- Village digital services: citizen data, public service requests, official document generation, facility records, and complaint handling.
- Helps village staff digitize administration and give residents clearer service channels.

13. SI Desa — Village Data & Public Services

- Village information/data management with citizen-facing service modules and administrative records.
- Supports village operators managing master data and day-to-day service transactions.

14. E-Office — Institutional Office Automation

- E-office for institutional correspondence and internal processes: document routing, status tracking, and office administration modules.
- Reduces paper-heavy handoffs with digital submission, approval, and archive-oriented flows.

15. API E-Surat — Correspondence Backend API

- API layer for electronic correspondence: letter metadata, status updates, integrations with the e-surat application, and client consumption endpoints.
- Enables mobile/web clients to create and track letters through a consistent backend contract.

16. E-Surat — Electronic Correspondence System

- Full e-correspondence application: compose/register letters, disposition/routing, status history, and archival views.
- Works with the API layer so institutional letter workflows stay synchronized across clients.

17. Bizora POS — Point of Sale System

- POS web system for retail/ops: product catalog, sales transactions, cashier flows, stock movement, and sales reporting.
- Backend handles pricing/stock consistency and transactional integrity during peak cashier use.

18. Venetian — Web App + Admin Console

- Customer-facing web application with a separate admin console for content/ops management, master data, and monitoring.
- Split architecture between public web experience and admin tooling for day-to-day operators.

19. Telemedicine — Remote Healthcare Web App

- Telemedicine web flows for remote care: patient/provider interaction paths, scheduling or consultation support, and clinical ops screens.
- Built to digitize remote healthcare touchpoints beyond a simple brochure site.

20. GIS UMKM — Spatial Business Mapping

- GIS web app to map and manage UMKM locations/business data on spatial layers, with search/filter and admin data maintenance.
- Helps local economic stakeholders see business distribution geographically.

Additional production projects are available on request (115+ repositories across healthcare, government, finance, commerce, and operations domains). Profile: github.com/renoanthus

EDUCATION

Bachelor of Information Systems — Universitas Tanjungpura

GPA 3.64/4.00 · 2014 – 2019 · Pontianak

CERTIFICATIONS

Digital Talent Scholarship — Cloud Computing, Dicoding Indonesia

Credential ID: 4EXGY9Y81XRL · Issued Oct 2020 (expired Oct 2023)

AWARDS

- 3rd Place, Information Security Application Competition, West Kalimantan Province
- 4th Place, Pontianak City Startup Competition

LANGUAGES

- Indonesian — professional

- English — technical documentation / professional working

ORGANIZATIONS

- INFOKOM Staff, HIMASTER, 2015–2016
- Head of KOMINFO Division, HMSI, 2017–2018
